

TrackAct

People in their daily routine busy schedules often tend to forget about household works, daily chores and sometimes forget what they wanted to buy after visiting a grocery store. To help people with that, our app **TrackAct** is designed in such a way that it tracks everything from your to-do tasks and shopping lists to the existing grocery items at your house. A tiny app to take care of your everyday big problems.

Features

- Flash screen
- Registration using Phone number verification via OTP
- Separate Dashboard for to-do tasks list, Shopping lists and the Tracker
- Notification on a particular day at a particular time to remind your task
- Can share your shopping list with any other person via WhatsApp
- Can update,delete several tasks/shopping items the moment they are dealt with

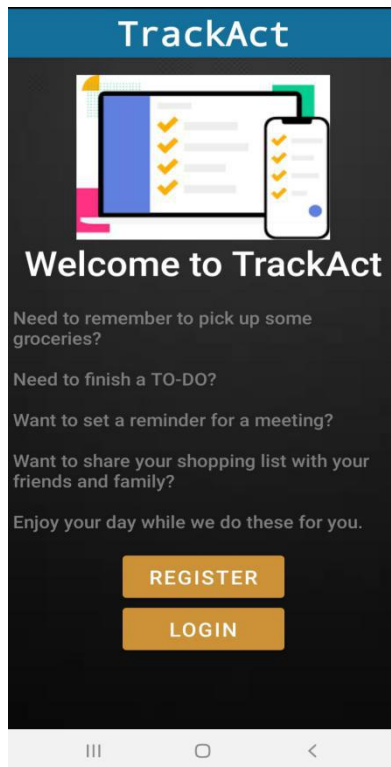

App Functionality

- Flash Screen

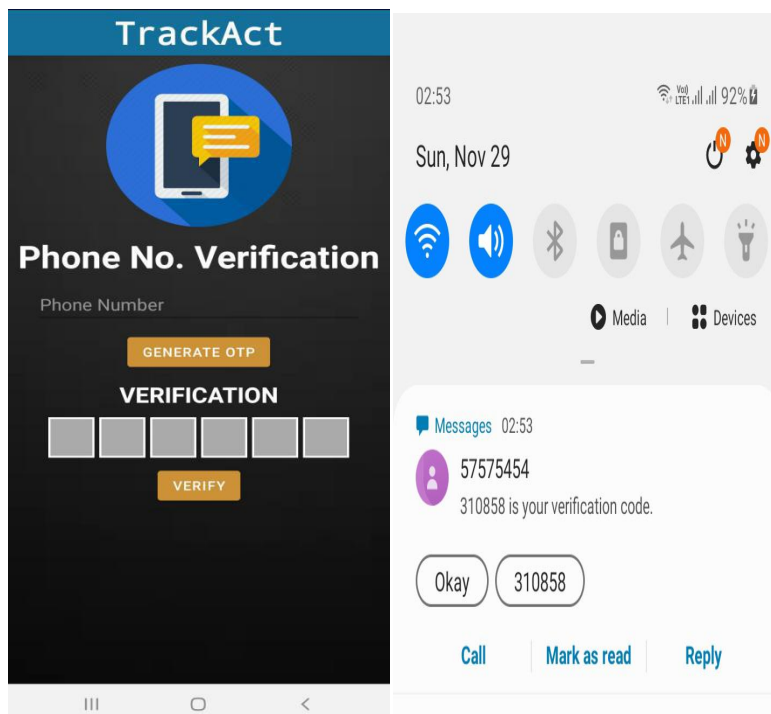

The flash screen(representing the app) stays on the screen for 2 seconds (every time we open the app) and then moves on to the next page.

- Home Page

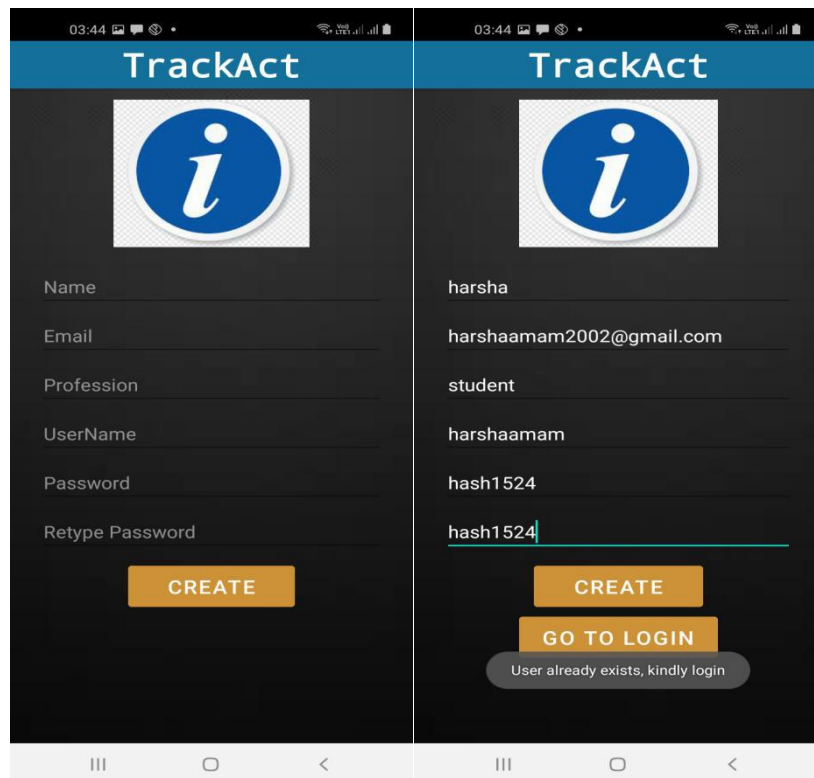

An informative home page which reveals the theme of the app for the people who r using it for the first time. Gives them two options to register or login

- Register Page

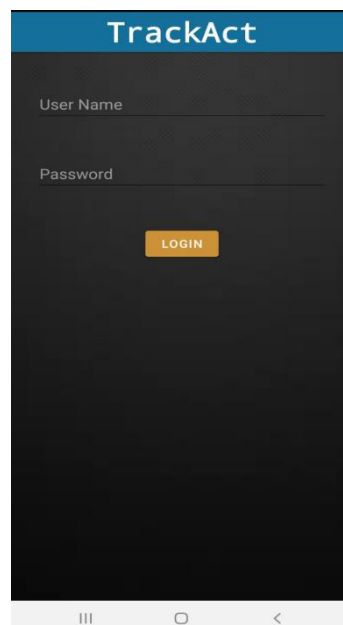

Registration through phone number verification happens through this page.

- Creating an Account

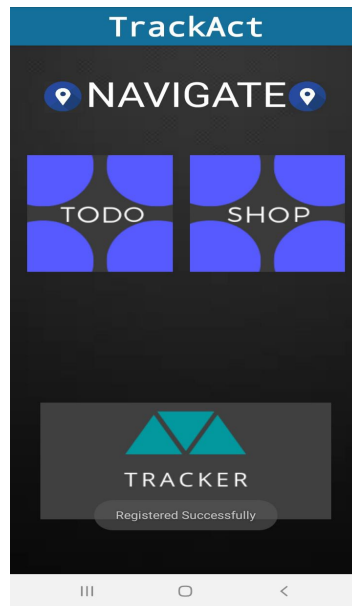

The account setting page takes up the details of the user using the app through which they can create their accounts. But if the user already exists, it requests the user to visit the login page.

- Login Page

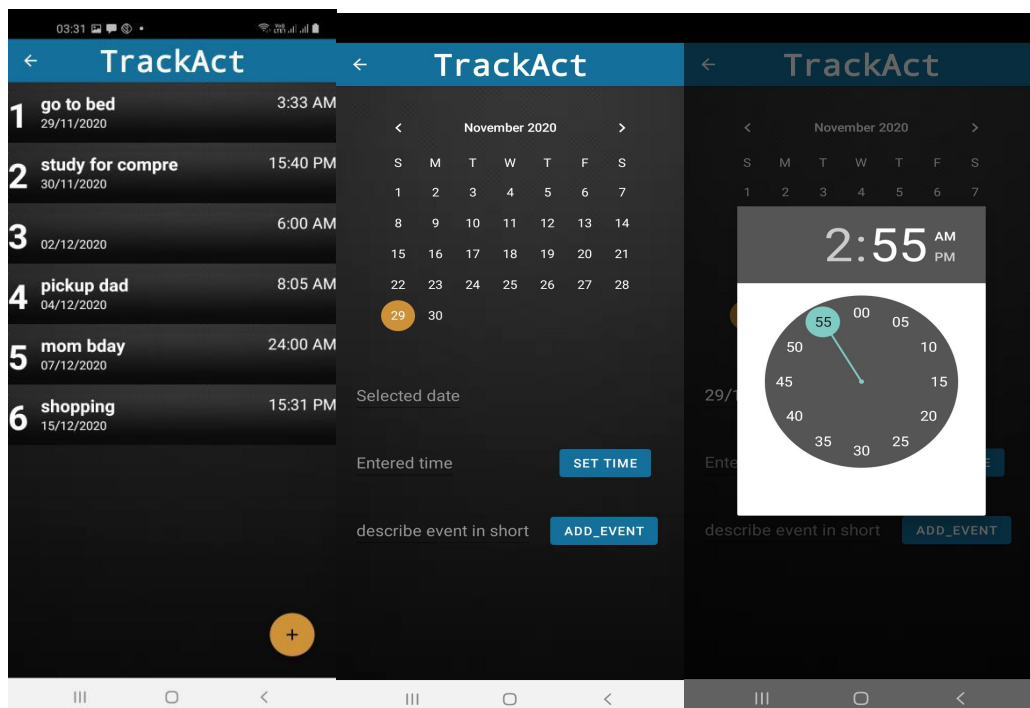

Now the user can login and visit the dashboard.

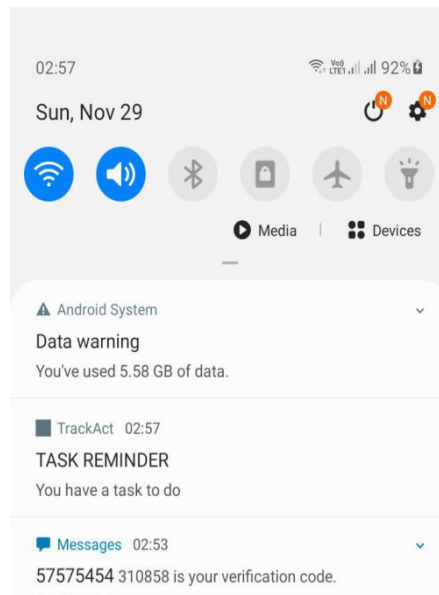

- Dashboard

Once the registration/login is successful, the user visits the simple yet attracting dashboard where even a laymen can understand the theme of the app and doesn't get lost

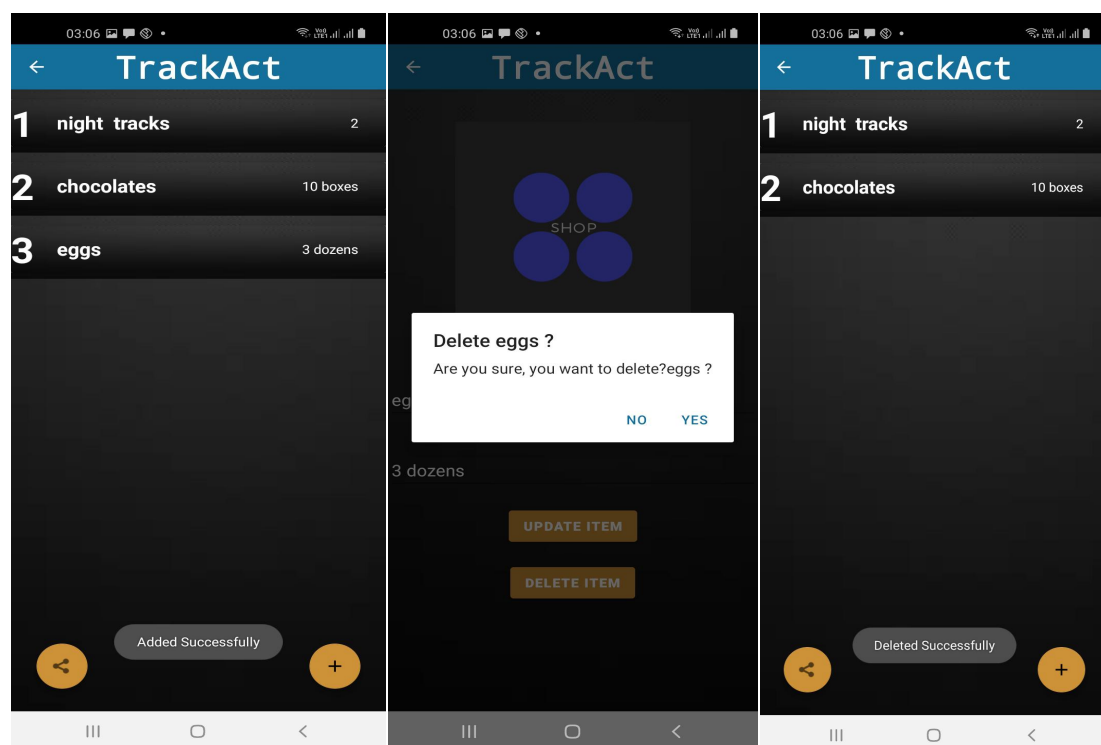

- To-do

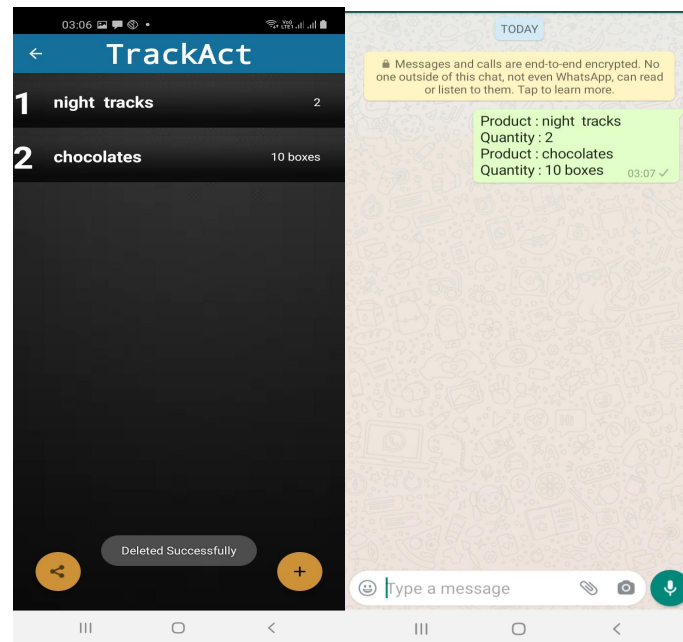

In this page user picks up the date and time he wants and can set task for which the app notifies sharp at that very particular mentioned date and time. Any number of tasks can be added to the list.

● Shop

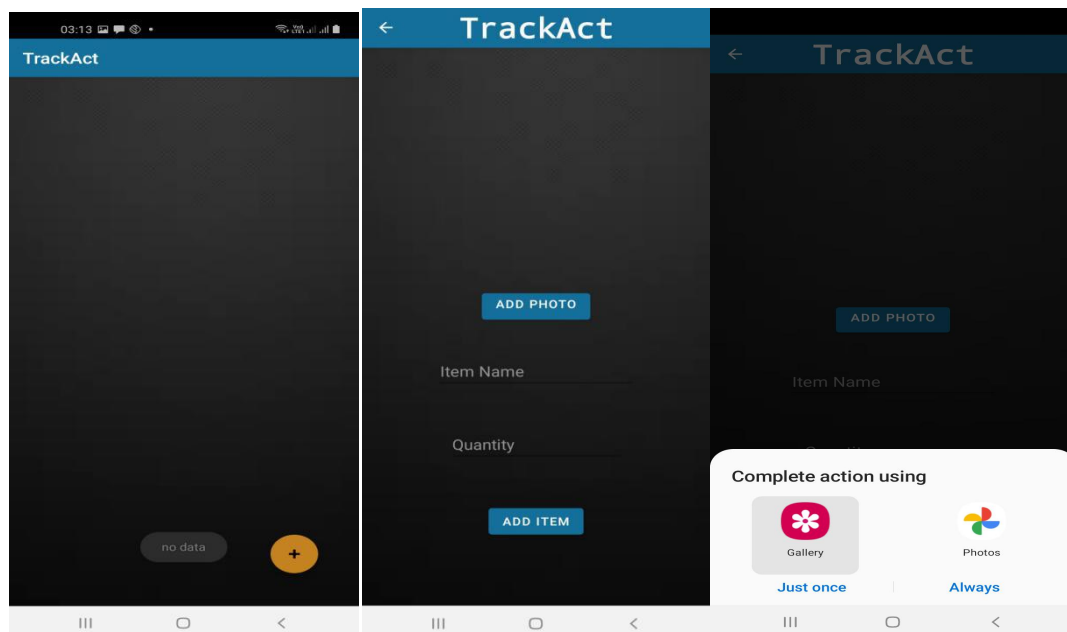

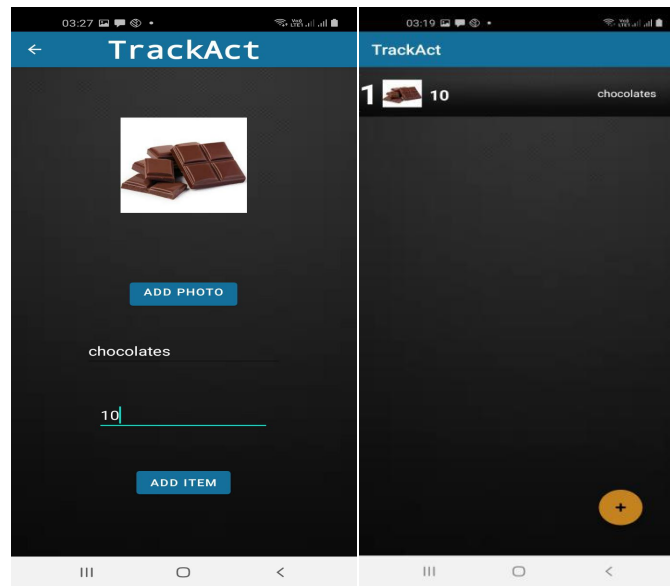

A user can share any number of item he wishes to purchase and can update them, delete them as he wishes.

And also the user can share his shopping list or grocery list with his/her friends and family.

● Tracker

A user can add the groceries already existing in the house and keep updating them on the app they decrease in number until they're about to finish and the user decides to add them in the shopping cart.
